Office of the State Election Commissioner
905 S. Governors Ave., Suite 170
Dover, DE 19904

Our records indicate that you may be eligible to vote, but do not appear to be registered. If you are 18 years old or older, a resident of Delaware and a U.S. citizen, you may be qualified to vote.

Visit <https://registertovote.elections.delaware.gov>, fill out, print, sign and send in your application.

To vote in the November 6, 2012 General Election, you must register to vote by October 13, 2012.

If you have questions or need help, please contact the State Election Commissioner by email at coe_vote@state.de.us or by phone at (302) 739-4277.

Sincerely,

Elaine Manlove
State Election Commissioner

Oregon Data Matching Procedure

The modified version of Ansolabehere and Hersh's (2017) AGDN matching procedure utilized first name, last name, date of birth, street address number, and zip code to create a series of six matching identifiers with decreasing probability of uniquely identifying individuals. The two datasets were matched by the most unique identifier using all 5 elements, and all unique matches were accepted. Then the two datasets were matches using the next identifier, and all records in the experimental population (the ERIC EBU list) with new matches were accepted. This procedure was repeated through four more rounds of matching using successive identifiers.

The matching identifiers were, in order: a) first name, last name, date of birth, street address number, and zip code; b) last name, date of birth, street address number, and zip code; c) date of birth, street address number, and zip code; d) first name, last name, date of birth, and zip code; e) first name, last name, date of birth, and street address number; f) first name, last name, and date of birth.

Discussion of reporting intent to treat effects

All reported effects are “intent to treat” because we do not have reliable data on who was successfully treated by the mailing. The Delaware Office of the State Elections Commissioner collected data on postcards with addresses rejected by the Post Office (3.81%) or returned as undeliverable (6.99%). We do not use this information to calculate Conditional Average Complier Effects [CACE] because the undeliverable mail is only a partial measure of failure to treat. We also do not have comparable data about undeliverable mail for Experiment 2. Moreover, while the CACE point estimates would be approximately 11% larger for than the average intent-to-treat effects reported below, the statistical significance and substantive interpretation is identical.

Tables

SOM Table 1a: Descriptive statistics and balance for Experiment 1 (Delaware 2012)

	Control	Visual Cue - Urgency	Deadline - Urgency	National Civic Duty	State Civic Duty	Total
Last name starts: A-C	19.4%	19.8%	19.2%	19.2%	20.0%	19.5%
Last name starts: D-H	22.2%	22.6%	22.7%	22.2%	21.5%	22.3%
Last name starts: I-M	21.4%	20.4%	21.9%	21.0%	21.2%	21.2%
Last name starts: N-S	23.3%	23.5%	22.9%	23.7%	23.4%	23.4%
Last name starts: T-Z	13.6%	13.7%	13.3%	13.8%	13.8%	13.6%
Num. Targets in HH	1.2	1.2	1.2	1.6	1.2	1.3
3 digit zip = 197	34.3%	33.6%	34.1%	34.2%	33.7%	34.0%
3 digit zip = 198	18.0%	18.8%	18.2%	18.9%	18.4%	18.5%
4 digit zip = 197	47.7%	47.6%	47.7%	46.8%	47.9%	47.6%
N (individuals)	6,028	6,046	6,045	6,080	6,048	30,247
N (households)	5,743	5,737	5,762	5,698	5,747	28,687

Note: Multinomial regression of assignment on covariates produces a log-likelihood ratio test with p=0.997 indicating no relationship between assignment and observable covariates, as expected. Experimental population (control and treatment conditions) excludes records initially identified by ERIC who registered prior to the treatment mailing data.
